1. ASME Class 900-1500 available only in 0.75 to 4 inch (20 to 100 mm) sizes.

ASME Class 2500 available only in 0.75 to 2 inch (20 to 50 mm) sizes.

2. See Materials of Construction Tables for other temperature limitations.

3. 2-Stage design only available with Quick Change seat rings.

4. Soft seat is limited to a maximum of 1000 psi (70 bar) shut-off and a maximum of 450°F (232°C).

Masoneilan 21000 Series products meet design and materials requirements of PED Directive 2014/68/EU.

- Materials and processes in accordance with the requirements of NACE specification MR0103. Applications requiring compliance to MR0175, 2003 Rev. or ISO 15156 would require engineering review.
- Inconel 718 will be substituted in applications when required due to the differential pressure.
- Materials designated for these parts conform to NACE non-exposed bolting requirements.
- Materials designated for these parts conform to NACE exposed bolting requirements.

5. Consult Masonelian for NACE Applications above ANSI Class 600 (PN 100) rating or above 450°F (232°C).

6. Optional component and materials for Close Clearance low flow trim option.

7. To be used with stainless steel body and bonnet.

8. Guide bushing not used with close clearance trim.

9. Solid Stellite or Equivalent is not available for Lo-db/Anti-Cavitation plugs.

# Bellows seal design features 21000 BS Series

## Standard construction

Bellows seal configuration is fully compatible with the standard 21000 Series trim and actuator options providing equivalent capacity capabilities for each valve size. The standard packing box design and packing design options are used as a secondary stem seal.

## Rugged design

The formed bellows construction is an externally pressurized design that is capable of operating up to the full valve ANSI B16.34 pressure rating. Guides are located above and below the bellows providing excellent stability to withstand flow induced and mechanical vibration.

## Extended life

The bellows assembly is designed for 50% compression/extension (zero stress) at the valve mid-stroke position to help maximize cycle life. Bellows torsional stresses are also reduced with the anti-rotation feature provided by flats on the plug stem.

## High quality

Each bellows subassembly is helium leak tested to verify weld integrity, and is also hydro-statically tested as part of the complete valve assembly. Mechanical travel stops are also designed into both the bellows and valve assemblies to prevent over compression or extension.

## Smart solution

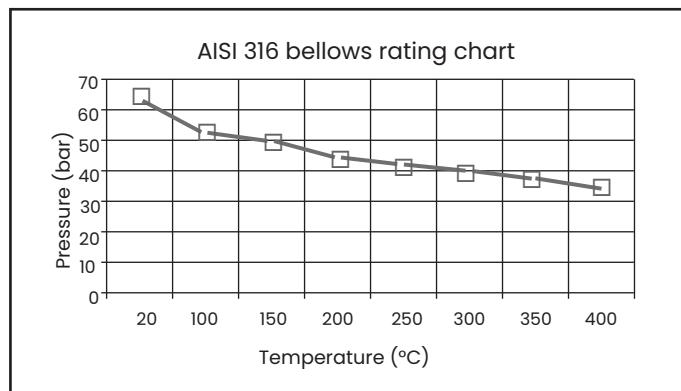

Bellows installed cycle life can be monitored in the field by utilizing Masoneilan's SVI™ Digital Positioner with actual process data. This advanced preventative maintenance option will help improve plant safety by identifying potential hazardous failures before they happen, and cut cost by reducing premature bellows replacement.

# High Pressure Design Features

## API 6A 21000 Series

API 6A 21000 Series Valve is offered from 0.75 to 1 inch, with API class 10 kPSI [690 bar] to 15 kPSI [1034 bar].

This design consists of a single ported, cage guided control valve designed to meet API 6A standards for high pressure applications:

### Forged Body

Forged bodies will meet 15 kPSI (1034 bar) in operation.

### Integral Bonnet

Designed with an integral bonnet, the API 6A 21000 Series Valve has a smaller profile and reduced weight.

### Integral Internal Components

Seat and cage are one piece allowing for ease of installation and maintenance.

### Flow Characteristic

Linear characteristic is standard.

### Trim Options

Full area and reduced trims are available for optimal control.

### Leakage Rate

Class IV & V leakage is standard as per IEC-60534-4.

### Hardened Trim

For longer service life, hardened trim is provided to handle high pressure.

### Packing

Standard packing and environmental LOW E packing options are available to comply with application requirements.

### NACE Compliance

NACE MRO175/ISO 15156-1 compatible materials are available.

### Size and ratings

**Pressure ratings: API class from 10 kPSI [690 bar] to 15 kPSI [1034 bar]**

1. Pressure drop is limited at 10 kPSI [690 bar] for the 15 kPSI [1034 bar] valve.

2. API 6A 21000 valves are designed as control valves, not as isolating valves.

3. Lifting lugs are provided for handling.
